

# ISOVER Aluminium Tape

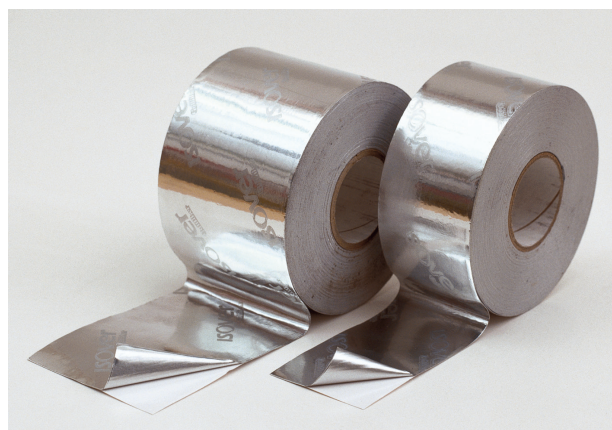

**Use**

ISOVER Aluminium Tape can be used for attaching ISOVER pipe sections and mats. In addition, the tape can be used on insulation joints for installations with a high risk of condensation.

**Product**

ISOVER Aluminium Tape is a strong aluminium foil coated with acrylic adhesive. The tape adheres quickly and shapes itself to the substrate, which ensures good adhesion and vapour sealing.

The tape is also resistant to aging, temperature fluctuations, water, moisture and UV light.

**Storage**

The tape is stored at normal room temperature and protected from direct sunlight.

**Application**

When applying, the surface must be dry and clean.

Application temperature: The tape can be applied at temperatures from 0 to 50 degrees (the surface must be free of ice or moisture).

Usage temperature (installed): From -40 to +120 degrees.
